Article Starting Point

Sample RST content to start from and modify for your article.

```rst
Main Header for your article
#############################################

:lang: en
:category: a valid category
:date: 2025-10-11 20:03:36+00:00
:tags: article, template
:slug: unique-article-name
:authors: Pierre Bernatchez
:summary: One line Summary of your article

.. |copy| unicode:: 0xA9 .. copyright sign

.. |---| unicode:: U+02014 .. em dash
   :trim:

.. footer:: Copyright |copy| 2025 Pierre Bernatchez |---| all rights reserved.

Start here
```

Modify the **main header** to something suitable for your artricle.

Modify **category** to one appropriate for your article.

Modify **date**. You can use command line command "date -u --rfc-3339=seconds" to get a correctly formatted date string.

Modify **tags** to relevant keywords for your article.

Modify **slug** to be the unique name for your article. We use that as the basis for the file name of the .rst file. Like this slugname-en.rst, slugname-es.rst, slugname-fr.rst are the 3 language file names for the article with the slug: slugname.

Modify **authors** to your own name.

Modify **summary** to something appropriate to your article.

Modify the name in the **footer** line to yours also.

Write your article, using RST markup beginning at **start here**
