

Example converted from markdown

The .rst source here was converted from markdown using [Convert MD to RST](#)

I tried it on a small test file, this is the result:

Markdown Image Inline:

```
![ogopogo](../images/ogopogo.jpg "Canada's Ogopogo Monster")
```

ogopogo

FOOTNOTES

Footnotes^[^1] have a label^[^foobar] and the footnote's content.

[^1]: This is a footnote content. [^foobar]: A footnote on the label: "foobar".

Footnotes¹ have a label² and the footnote's content.

TABLES

```
Col 1 head | Col 2 head ----- | ----- row 1 col 1 | row 2 col 1 row 2 col 1 | row 2 col 2
```

Col 1 head	Col 2 head
row 1 col 1	row 2 col 1
row 2 col 1	row 2 col 2

¹ This is a footnote content.

² A footnote on the label: "foobar".
