

shrink mp4

Problem

I needed to shrink the size of an mp4 video.

The mp4 my cell phone produced was 1920x1080 mp4. (flipped sideways somehow)

It was way too big for the documentation files.

Solution

Using this command I reduced the size to 1/4 what it was.

```
ffmpeg -i ../../incoming_images/lavar_frijoles.mp4 -vf "scale=270x480, setsar=1" -c:v libx264 -acodec copy lavar_frijoles.mp4
```
